
General Remodeling FAQ

HOMEWORK REMODELS | Greater Phoenix

Updated October 24, 2026. Based on our current online FAQ and confirmed business policies.

Hundreds of decisions go into a Phoenix home remodel. At Homework Remodels, a trusted Phoenix home renovation contractor, we strive to make the pre-construction phase seamless. To help you navigate the discovery phase of your remodel planning, we have compiled a list of frequently asked questions about Phoenix home remodels that reflect the desert climate, energy-efficient renovations, and outdoor living spaces.

What is your experience with remodeling homes in the greater Phoenix area?

Founded in 2005 by Steve Shinn, Homework Remodels is a trusted design-build remodeling company serving homeowners across Phoenix and Scottsdale. As a licensed Arizona contractor with deep roots in the Valley, we understand the desert climate, local building codes, and the architectural character that makes our communities unique.

From **historic bungalows**, including working with the **Phoenix Historic Preservation Office**, to modern luxury estates, we've built a strong track record of mid- to high-end transformations - thoughtful **whole-home renovations**, lifestyle-enhancing **home additions in Phoenix & Scottsdale**, and seamless **casitas & ADU additions** and open-concept layouts that align design, budget, and build quality. Our design-build process keeps communication clear and ensures your finished space reflects your vision, lifestyle, and long-term goals.

What are your areas of expertise?

At Homework Remodels, we specialize in thoughtful, full-service remodeling that transforms the way our clients live. Our expertise covers every stage - from initial vision to final walkthrough - with a focus on lasting value, comfort, and design integrity.

- **Concept-to-Completion Renovations**

We provide complete planning, **award-winning design**, and construction services for **kitchens and bathrooms**, **whole-home remodels**, **room additions**, and **guest houses**, including **casitas and ADUs**. We also take on select **commercial remodeling** projects where our expertise can make a lasting impact.

- **Desert Climate Remodeling**

From insulation and energy-efficient systems to drought-conscious upgrades, we design remodels that make sense for the Phoenix lifestyle. Whether you're looking to reduce utility costs or improve comfort in summer months, we tailor each solution to our climate and your goals.

- **Outdoor Living Spaces**

We create custom outdoor kitchens, covered patios, and **open-concept outdoor living areas** that allow you to enjoy your home beyond its walls - perfect for entertaining, relaxing, or adding functional square footage without expanding your interior footprint.

Can I meet with a consultant for a free estimate and discuss my remodeling project?

Yes! We offer a complimentary consultation and would be glad to meet with you to discuss your goals, ideas, and priorities. Whether you're planning a **kitchen and bathroom addition**, an **MCM Tiny house**, or a **full home remodel**, this first meeting is about listening and sharing - not sales pressure.

Our goal is to collaborate with you in designing a remodel that reflects your vision, lifestyle, and long-term needs. Understanding what goes into the remodeling process from the beginning gives you a confident foundation for every decision to follow. You can [schedule your free consultation here](#) to get started.

How do you begin planning the home remodel?

Every successful remodel begins with a strong foundation - our structured **pre-construction system**. This is where we define the scope of your project, explore design options, evaluate site conditions, and align the vision with your goals and budget.

Whether you're planning a **whole-home remodel**, **home addition**, or **casita**, we start by creating a detailed roadmap that accounts for design, feasibility, permitting, and construction strategy. This proactive planning process helps reduce surprises, keeps communication clear, and ensures your remodel unfolds with confidence - from start to finish.

Are there costs associated with the pre-construction phase?

We offer complimentary consultations to get to know you and your project. If you choose to move forward, our formal pre-construction phase begins with a planning and design agreement. This phase develops your project through floor plans, material and color selections, and shopping assistance. We then meet at your home with the trade partners involved to obtain proposals for the planned work. You review and approve the final specifications and budget before signing a construction agreement.

Fees for this phase typically start at \$5,000, depending on the complexity of the remodel. It's a smart investment that allows us to explore options, provide accurate pricing, and plan every aspect of your **design-build remodel** before construction begins. The result is a clear, fixed proposal - and a smoother remodeling experience from day one.

DESIGN-BUILD SYSTEM

What is the design-build system, and how does it improve the remodeling process?

At Homework Remodels, our nationally certified designers lead most preconstruction design and planning, using drafting software and 3D images to help you understand the proposed spaces. A professional draftsman develops our designs into drawings for city review and permitting, and professional engineers review the work when needed. We coordinate these contributions with pricing and construction planning.

This model allows us to move efficiently through each phase while minimizing surprises and delays. From **kitchen remodels** to **guest house additions**, our system is built to deliver a smoother, more predictable remodeling experience.

Key Benefits of the Design/Build System:

- **Cost Transparency:** Our proposals are based on actual site visits with trade partners and include real costs - not rough estimates.
- **Defined Scope and Pricing:** We complete selections during planning to support reliable scheduling and provide a transparent scope with a fixed-price construction proposal. Elective additions and concealed conditions requiring extra work are brought to you for approval through the written change process.
- **Quality Assurance:** You benefit from one cohesive team of designers, project managers, and skilled craftsmen working together on your behalf.
- **3D Renderings:** Visualize your new space before building starts, helping you make informed design decisions early.
- **Enhanced Communication:** A dedicated project manager guides you through every step, ensuring nothing gets lost in translation.

Our leadership holds individual NARI credentials: Steve Shinn is MCR, MCKBR, UDCP, and GCP; Sheila Lanier is MCKBR and UDCP. These certifications belong to the named professionals.

With Homework Remodels, you're not just hiring a contractor - you're partnering with a nationally certified, locally trusted design-build team **that** manages the details so you can enjoy the journey.

Do you offer design services in addition to construction?

Yes - we offer complete design services as part of our concept-to-completion remodeling process. Whether you're remodeling a kitchen, planning a **casita or ADU addition**, or transforming your entire home, our team works hand-in-hand with you to bring every detail of your vision to life.

As a design-build remodeling firm, we integrate design directly into the construction planning. That means smarter coordination, better cost control, and fewer surprises. Our collaborative design process includes:

- Floor plan development and layout options
- Appliance and plumbing fixture selection
- Cabinet styles, finishes, and hardware
- Countertop materials and slab selection
- Decorative tile for backsplashes, showers, and floors
- Lighting fixtures and electrical layout
- Coordinated color palettes for paint, materials, and finishes

We also provide home design consulting services for clients who need expert input on selections before or during construction. With Homework Remodels, your design choices are intentional, cohesive, and supported by our in-house team every step of the way.

COST AND BUDGET

Can you provide a detailed estimate of my project?

Absolutely. At Homework Remodels, we provide detailed, transparent estimates that reflect the scope, materials, and craftsmanship your project deserves. Whether you're planning a [home addition](#), [bathroom renovation](#), or [whole-home remodel](#), our process is designed to eliminate guesswork.

During the pre-construction phase, we evaluate your space, confirm the design direction, and collaborate with trade partners to develop a realistic, fixed-cost proposal. We take the time to align the estimate with your goals and your investment priorities - so you understand exactly what to expect before construction begins.

Our clients appreciate that we don't use "square-foot pricing." Instead, we tailor each estimate to the project's true complexity, scope, and selected finishes for a more accurate and informed planning experience.

What factors can influence the final cost of the project?

Like any custom remodel, your final cost depends on several factors. While we provide a detailed proposal up front, changes that occur after design approval can affect your overall investment. These may include:

- **Design Revisions:** Adjustments to the layout, scope, or architectural features
- **Material Selections:** Choosing premium fixtures, cabinetry, or finishes
- **Site Conditions:** Unforeseen structural or utility issues uncovered during construction
- **Scope Expansion:** Adding square footage or incorporating additional features mid-project

Our approach centers on thorough planning and a fixed-price proposal for the agreed work. We do not promote a standard contingency budget. Homeowners may request additional work or features, and occasionally concealed conditions require attention. We explain the proposed work and its cost and schedule effects, then obtain your approval before proceeding. Whether it's a [kitchen and bath addition](#) or a [guest house](#), we remain transparent, communicative, and focused on protecting your vision and budget.

Will Homework Remodels provide a written lien waiver?

Yes. Upon completion of your project and final payment, we provide a written lien waiver upon request. Ask our team which waiver and payment documents apply to your project, who signs them, and what payments or work each document covers. The wording and scope of the actual documents should be reviewed rather than assuming one company waiver covers every trade partner.

Providing a lien waiver is part of our commitment to transparency, professionalism, and protecting your peace of mind - especially for larger investments like [home additions](#) or [casita construction](#). It's just one more way we ensure every detail is handled with care, start to finish.

PERMITS AND REGULATIONS

Are you familiar with Phoenix building codes and permitting processes?

Yes. As a locally based remodeling contractor serving Phoenix and Scottsdale, Homework Remodels stays current on all relevant building codes, zoning requirements, and permitting procedures. We understand what's required for residential remodels, from simple bedroom additions to complex guest houses and open-concept transformations.

We also have extensive experience working with the City of Phoenix Historic Preservation Office. If you're remodeling in a designated historic neighborhood, we know how to navigate the additional layers of review, zoning variances, and architectural requirements involved.

Our design-build team manages the permitting process efficiently and accurately - so your remodel proceeds smoothly, with no avoidable delays.

Will you oversee the permitting process?

Yes. Homework Remodels manages the entire permitting process on your behalf - from preparing drawings and documentation to submitting applications and coordinating with city officials, including the **Historic Preservation Office** if necessary. We handle all required approvals and inspections, ensuring that your remodel meets code and progresses without unnecessary delays.

For homes in historic districts, we also assist with any special hearings or design review requirements through the City of Phoenix Historic Preservation Office. Whether you're planning a **home addition**, casita, or open-concept remodel, you can rely on us to handle the red tape so you can focus on the fun parts - designing your new space.

Do you have insurance to cover any potential damage during the project?

Yes. Homework Remodels carries general liability and workers' compensation insurance, with documentation available upon request. Coverage is subject to the applicable policy terms, limits, and exclusions; it should not be understood as a guarantee that every possible loss is covered.

Whether you're undergoing a **bathroom renovation**, **room addition**, or **full home transformation**, having proper insurance in place is essential. We believe it's not just a business requirement - it's part of doing right by our clients.

To learn more, visit our guide on [the importance of contractor insurance](#).

Do you work on all ages of homes?

Yes. At Homework Remodels, we work on homes of all ages and architectural styles throughout the Greater Phoenix area. From early **20th-century bungalows** to contemporary builds, we bring thoughtful design and skilled craftsmanship to every project.

We're especially experienced in remodeling historic and mid-century homes - revitalizing them with modern comfort while honoring their original charm. Whether it's a **whole-home remodel**, **kitchen and bath upgrade**, or **open-concept transformation**, our team understands how to navigate aging infrastructure, original materials, and historic preservation requirements when needed.

If your home is newer, we help maximize its potential with smart layouts, lifestyle-focused upgrades, and **custom additions** that blend seamlessly with the existing architecture.

CLIMATE-RELATED QUESTIONS

How do you manage extreme heat and dust control/air quality during the remodeling process?

Arizona's climate presents unique challenges, especially during the summer months. At Homework Remodels, we take proactive steps to ensure a safe, comfortable, and clean jobsite - for both our team and your family.

To manage extreme heat, we schedule labor-intensive tasks during the cooler hours of the day, provide shade structures, and use cooling equipment as needed. Worker safety is a priority, and thoughtful scheduling helps keep projects moving even during triple-digit temperatures.

Dust and air quality are also key concerns. Before demolition or excavation, we pre-wet surfaces to minimize airborne particles. During construction, we may use:

- **HEPA filtration systems**
- **Negative pressure enclosures**
- **Plastic barriers to separate work areas**
- **Frequent job site cleanings** to reduce dust accumulation

These measures are especially important in active homes, during **whole-home remodels, kitchen renovations**, or any interior remodel that involves demolition. Your comfort, safety, and indoor air quality remain a priority throughout the process.

Can you design outdoor living spaces that are suitable for Arizona's climate?

Absolutely. At Homework Remodels, we specialize in creating outdoor living spaces that are beautiful, functional, and built to thrive in the desert. From shaded patios to full outdoor kitchens and **open-concept entertainment areas**, our designs reflect the unique conditions of the Phoenix and Scottsdale climate - while extending the livable space of your home.

Key strategies we incorporate include:

- **Ample Shade:** Pergolas, awnings, and covered structures to shield from direct sun
- **Ventilation:** Open designs that allow airflow, reducing trapped heat
- **Durable Materials:** Heat- and UV-resistant finishes like stone, metal, and composite surfaces
- **Cooling Features:** Misting systems, outdoor fans, and even water features for ambient comfort
- **Drought-Tolerant Landscaping:** Low-maintenance designs with native plants, gravel, and artificial turf
- **Lighting:** Layered exterior lighting for ambiance and functionality, even after sundown

Whether you're looking to host gatherings, relax in solitude, or add a **guest casita with a private patio**, we'll help you design an outdoor space that supports your lifestyle - 365 days a year.

What steps do you take to ensure energy efficiency in Arizona's desert environment?

Energy efficiency is a key part of every remodel we design - especially in the heat-intensive desert climate of Phoenix and Scottsdale. Whether you're renovating a single room or planning a [whole-home remodel](#), our team incorporates smart solutions that enhance comfort while reducing long-term energy costs.

Here are a few of the energy-saving strategies we regularly implement:

- **Insulation Upgrades:** We prioritize high-performance insulation in attics, walls, and ceilings - including spray foam - for optimal thermal protection.
- **Energy-Efficient Windows:** We recommend low-E windows that reflect radiant heat, reduce glare, and improve indoor comfort.
- **High-Efficiency HVAC Systems:** Proper ductwork design and high-SEER-rated systems help cool your home more effectively and affordably.
- **Tankless Water Heaters:** These systems reduce standby energy loss and provide hot water on demand.
- **Energy Star Appliances:** We guide you toward appliance options that use less energy and are better suited for desert living.
- **LED Lighting:** Low-wattage, long-lasting lighting reduces both energy use and interior heat buildup.
- **Solar Readiness:** We can also design your home to accommodate future solar panel installations if desired.

Steve Shinn holds NARI's Green Certified Professional credential. Our team is committed to sustainable remodeling practices that make your home more efficient, comfortable, and cost-effective - without sacrificing style or quality.

What are your recommendations for outdoor kitchens and entertainment areas?

In the Phoenix climate, your backyard can be one of the most enjoyable spaces in your home - year-round. We design outdoor kitchens and entertainment areas that blend beauty, function, and durability to help you make the most of desert living.

Whether you're adding a patio to your main home or building a [guest house with private outdoor space](#), we recommend:

- **Heat-Resistant Materials:** Natural stone, stainless steel, and tile are ideal for countertops and cooking surfaces.
- **Built-In Cooking Features:** Grills, smokers, pizza ovens, and outdoor fireplaces help extend your entertaining season.
- **Ample Storage:** Enclosed cabinetry and weather-resistant drawers keep tools, utensils, and appliances protected.
- **Prep and Serving Space:** Generous counter areas allow for food prep, staging, and buffet-style meals.
- **Shade and Cooling:** Pergolas, umbrellas, misting systems, and ceiling fans keep the space usable even on hot afternoons.
- **Lighting:** Integrated task and ambient lighting - string lights, sconces, and under-counter LEDs - help set the mood after sunset.

- **Desert-Friendly Landscaping:** We design with native plants, gravel pathways, and low-maintenance materials to create a seamless, drought-conscious environment.

If you're considering a full **open-concept outdoor living upgrade**, we can help you design a custom space that reflects how you live and entertain - with comfort, character, and climate-smart design at the core.

POOL AND OUTDOOR LIVING

What is your experience with outdoor living spaces and pool renovations?

- We have extensive experience designing and remodeling outdoor living spaces that complement your home and enhance your lifestyle. From patios, decks, and shade structures to fully integrated **outdoor kitchens** and custom seating areas, our projects are tailored for year-round enjoyment in the Phoenix and Scottsdale climate.
- Homework Remodels does not directly build or remodel swimming pools. When a project includes pool work, we introduce specialist contractors who work directly with the homeowners. We coordinate the surrounding outdoor-living design with that separate work where needed.
- If you're planning a full outdoor transformation that includes a **casita or guest house addition**, we ensure that all elements - landscape, hardscape, pool, and structures - come together beautifully.

WATER CONSERVATION AND SUSTAINABILITY

Do you offer water-saving options for plumbing and landscaping?

Yes. Water conservation is a top priority in desert remodeling, and we offer a wide range of water-saving solutions for both plumbing and landscaping. Our team designs with efficiency in mind - without sacrificing comfort, convenience, or style.

For plumbing, we recommend:

- **Low-flow fixtures** for sinks, showers, and toilets
- **Smart leak detection systems** to prevent water waste and damage
- **Energy Star-rated appliances**, such as dishwashers and clothes washers, are designed for low water use

For landscaping, we can guide you toward:

- **Smart irrigation systems** that adjust watering based on weather and soil conditions
- **Drought-tolerant plant palettes**, including native species that require minimal water
- **Mulching strategies** to retain moisture and reduce evaporation
- **Hardscape and artificial turf integration** for beautiful, low-maintenance outdoor environments

Whether you're remodeling your existing yard or creating an outdoor living space with a new **guest house**, we'll help you build a space that's attractive, functional, and environmentally responsible.

Are you familiar with local water restrictions and regulations?

Yes. As a locally based remodeling company serving Phoenix, Scottsdale, and surrounding communities, we stay informed about current water use guidelines and restrictions. This includes city-specific requirements for irrigation schedules, landscaping limitations, and plumbing fixture regulations.

Whether you're planning a [landscape renovation](#) or adding a [casita or ADU](#) with full plumbing, we ensure your remodel complies with all applicable water conservation rules. It's part of our commitment to sustainable remodeling and to helping homeowners build responsibly for the desert environment.

MATERIALS AND DESIGN

Can you incorporate sustainable materials into the remodel?

Yes. Steve Shinn holds the [NARI Green Certified Professional](#) credential. Homework Remodels is committed to incorporating sustainable materials and eco-conscious practices into every project. Whether you're remodeling a single room or your entire home, we can guide you in selecting durable, environmentally responsible materials that support both your vision and your values.

Some of the sustainable options we regularly recommend include:

- **Reclaimed and recycled materials** such as salvaged wood, brick, and tile
- **Locally sourced products** that reduce transportation emissions and support regional businesses
- **Low-VOC paints and finishes** for healthier indoor air quality
- **Porcelain and natural stone** for surfaces that are long-lasting, non-toxic, and timeless
- **Insulation and windows** with high energy efficiency ratings
- **Water-saving systems** like low-flow fixtures and drought-tolerant landscaping
- **Rainwater harvesting infrastructure**, when applicable

Whether you're planning a [kitchen renovation](#), a [whole-home remodel](#), or a new [ADU addition](#), we'll help you make sustainable choices that are both practical and beautifully integrated into your design.

What materials do you recommend for a kitchen, bathroom, or home remodel in Phoenix?

In the Phoenix area, material selection plays a critical role in long-term durability, energy efficiency, and low maintenance. At Homework Remodels, we help you choose products and finishes that not only reflect your personal style but also perform well in the desert climate.

For Kitchens:

- **Countertops:** Quartz and granite can be durable choices, but their heat-care requirements differ. Do not treat engineered quartz as safe for direct contact with hot cookware. Follow the selected product's care instructions; for example, [Cambria recommends a hot pad or solid trivet](#).
- **Cabinetry:** Hardwood or engineered wood with moisture-resistant finishes for easy upkeep.
- **Flooring:** Porcelain tile or luxury vinyl plank with waterproof cores is a practical and stylish option.

For Bathrooms:

- **Countertops:** Quartz, granite, or solid surface materials offer cleanability and longevity.

- **Flooring:** Porcelain or natural stone with slip-resistant finishes works well in wet areas.
- **Shower Walls:** Ceramic and porcelain tiles are top choices for water resistance and design flexibility.

For Whole-Home Updates:

- **Exterior Finishes:** Stucco with elastomeric coatings, stone veneer, and reflective foam roofs help protect against heat.
- **Windows:** Low-E glass windows that reduce solar heat gain while maintaining natural light.
- **Interior Finishes:** Low-VOC paints, engineered hardwood or tile flooring, and energy-efficient insulation.

Whether you're planning a [kitchen remodel](#), [bathroom upgrade](#), or [whole-home transformation](#), our team guides you through each material decision to ensure lasting beauty, comfort, and performance.

Do you offer energy-efficient options?

Absolutely. Steve Shinn holds NARI's Green Certified Professional credential, and our team evaluates energy-efficiency options for the agreed scope. Whether you're remodeling a single room or your entire home, we offer energy-smart solutions that reduce utility costs, improve comfort, and support long-term sustainability.

Our energy-efficient upgrades may include:

- **High-performance insulation** and air sealing to reduce thermal transfer
- **Low-E windows and doors** that reflect heat while preserving natural light
- **Energy Star-rated appliances** designed for water and energy conservation
- **High-efficiency HVAC systems** with properly designed ductwork
- **Tankless water heaters** and low-flow plumbing fixtures
- **LED lighting systems** that offer long life and reduced energy use
- **Solar readiness** planning if you wish to add renewable energy later

These strategies are incorporated into the early stages of design, especially for [whole-home remodels](#), [kitchen and bathroom upgrades](#), and [casita or ADU additions](#). We help you make informed decisions that balance sustainability with style, function, and comfort.

PROJECT MANAGEMENT

How do you communicate with clients throughout the project?

Clear, consistent communication is one of the most important parts of a successful remodel - and one of the things our clients value most. At Homework Remodels, we believe that a great remodeling experience is built on trust, collaboration, and regular updates.

From your initial consultation through final walkthrough, we provide personalized guidance and transparent communication. You'll work directly with a dedicated project manager who serves as your main point of contact. Whether you're remodeling a [kitchen](#), building a [home addition](#), or completing a [whole-home renovation](#), our team walks with you through every step of the process.

We also use visual tools like drawings and renderings to clarify design decisions, and we offer digital communication options for easy updates and quick check-ins - whatever works best for your lifestyle.

Do you provide regular project updates?

Yes. Throughout the construction phase, your dedicated project manager will provide regular updates on progress, schedule, and next steps. We keep you informed through your preferred method of communication - whether that's in-person meetings, phone calls, texts, or email.

Our goal is to make sure you always know what's happening and what's coming next. Whether you're undergoing a **bathroom remodel**, **adding a guest house**, or tackling a full **home transformation**, you'll have peace of mind knowing that your project is progressing smoothly - and that we're just a message away whenever questions arise.

How do you manage unexpected issues like finding mold or structural problems?

Uncovering unexpected issues - like mold, rot, or structural damage - is not uncommon during a remodel, especially in older homes. At Homework Remodels, we approach these situations proactively, with your safety, budget, and peace of mind in mind.

Here's how we handle it:

- **Thorough Initial Assessment:** We conduct a detailed pre-construction evaluation to identify visible concerns and reduce the likelihood of surprises.
- **Open Communication:** If something unexpected is discovered, we alert you right away and explain the issue clearly, along with your options.
- **Expert Solutions:** We collaborate with licensed specialists such as mold remediation experts, structural engineers, and inspectors to resolve the issue correctly and efficiently.
- **Transparent Pricing:** Any additional work is clearly documented in a formal change order before proceeding - no surprises.

Whether you're renovating a **historic home** or **building a new addition**, our experience helps us navigate these challenges with professionalism and care - so your project stays on track, and your goals remain within reach.

How do you manage changes in the project scope?

We understand that ideas evolve during a remodel - whether it's a design enhancement, an added feature, or a necessary adjustment based on existing site conditions, including structural findings during **load-bearing wall alterations**. At Homework Remodels, we handle scope changes with transparency and professionalism, always keeping your goals and budget in focus.

If you decide to make a change after your project has started, your project manager will:

- Discuss the requested change with you in detail
- Provide updated pricing or timeline information
- Document everything in a formal change order for your approval
- Coordinate with our team and trade partners to ensure seamless integration

No changes are made without your knowledge and written consent. Whether you're reconfiguring a **kitchen open concept layout**, upgrading materials mid-project, or adding features to a **guest house addition**, we ensure the process remains organized and client-focused from start to finish.

Warranty and Follow-Up

Do you warrant your work?

Yes. Homework Remodels provides a two-year warranty on all workmanship and materials we supply. Homeowners supply their own appliances; appliance manufacturers' warranties are handled through the appliance dealer. Your written agreement provides the applicable warranty terms and the process for requesting service.

If any issues arise after your project has wrapped up, we're here to help. Whether it's a [kitchen remodel](#), [home addition](#), or [casita project](#), our warranty policy reflects the same care, transparency, and client commitment that define our remodeling process.

For full details about what's covered, simply contact us - we're happy to walk you through it.

Can you provide examples of your previous work?

Yes. Homework Remodels is proud to showcase a wide range of award-winning remodeling projects across Phoenix and Scottsdale. Our portfolio includes [kitchen remodels](#), [bathroom renovations](#), [whole-home transformations](#), [guest house additions](#), and more.

You can explore our [project portfolio](#) to view real examples of our craftsmanship and design expertise. We're also happy to connect you with past clients who have completed similar projects and can share their experience working with our team.

To hear directly from homeowners, visit our [client testimonials page](#) for 5-star reviews and stories of successful remodels.
